### About

Trees provide a multitude of benefits to the people who live and work in them. Whilst some of the social and aesthetic benefits can be difficult to measure, Treeconomics uses the the i-Tree Eco tool help quantify and value some of the environmental benefits provided by urban trees, including carbon storage, carbon sequestration, stormwater reduction, and pollution removal.

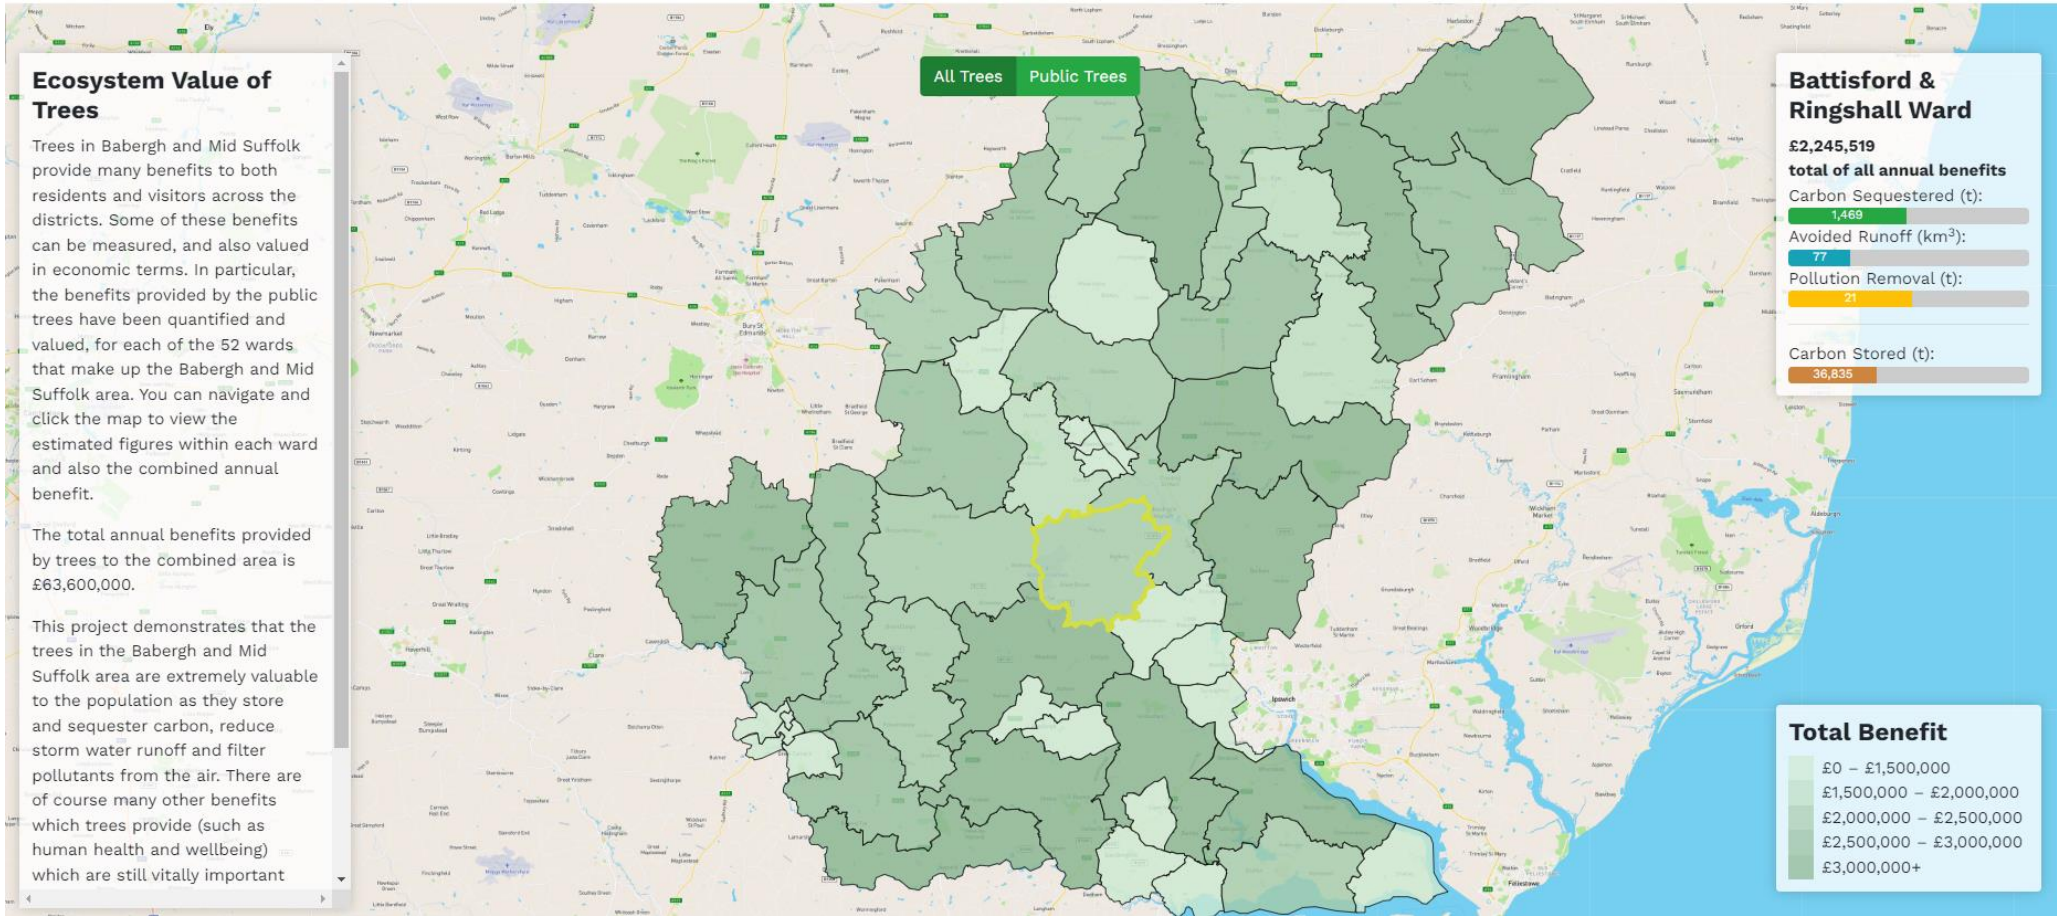

### Contact

If you are interested in conducting your own i-Tree study, just want to learn a little more, or want to put your trees on the map, get in touch:
